# my POS

Express- and Transaction POS

Web-based

Multi-Property

PC, Touchscreen and Mobile

International Multi-Property Web-POS

MYPOS is a web-based cash register with touch screen functionality that can be used both as a quick cash register at your point-of-sale and in your restaurant as a cash register system with comprehensive table management, number of guests and menu sequence and sends orders for meals immediately to the kitchen. MYPOS offers you simple and clear functions, professionally integrated into your business..

MYPOS POS: professional, but not expensive

MY POS offers a quick cash register and switches to the extensive restaurant cash register with comprehensive table management with just a few clicks. The POS system is multilingual, can be set individually for each user and offers a separate kitchen item description for foreign-language staff.

Express Checkout – Lightweight, but All-Rounder

All-inclusive resorts need a cash register that can be operated by your staff without a long training period, e.g. to invoice additional items such as bath accessories or magazines.
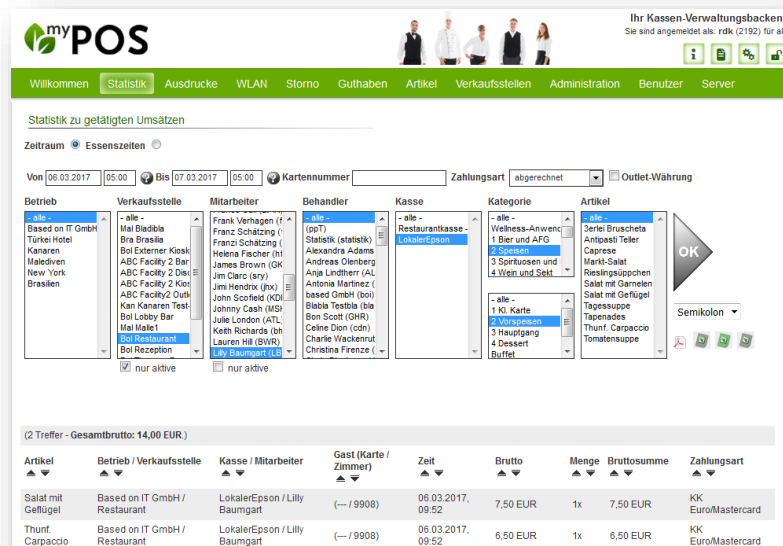

In the background, the cash register nevertheless provides everything you need for seamless billing, e.g. via the hotel bill or external payment methods: Is the guest checked in? Does he get a discount? Is the young person over 18? Is the item the guest wants discountable? Is Happy Hour at the moment?

- ✓ Multilingual, individually adjustable for each use

- ✓ Multi-Property-Option

- ✓ Separate designation of kitchen articles for foreign-language cooks

- ✓ Grouping of articles on the invoice receipt for larger companies

- ✓ receipt printing and entertainment receipt with freely configurable layout, headers and footers

- ✓ Integration in PMS: On-the-fly checking of guest status, individual reduction, guest profile payment to reservation or transponder ID

- ✓ Article quick selection keys via buttons, article numbers and RFID readers

- ✓ Favouring articles with colour highlighting

- ✓ Discounts on individual articles, total receipt

- ✓ or table in % and manual price entry, Discount options adjustable at item level (Club card or Happy Hour), fixed discount preadjustable

- ✓ Number of guests for each table, can be changed at any time

- ✓ Transfer guests: merge tables, divide tables, open part tables

- ✓ Interfaces for your systems, adaptable to your corporate design

Administration & Reporting

Wherever you are - via Internet you can evaluate the turnover of your sales outlets to the minute and manage employee data and articles in the backend of the cash register administration. A detailed statistic with all transaction data and one divided according to article groups and times of day.

- ✓ Create articles, define merchandise categories and their discount eligibility

- ✓ Favor popular items for faster booking

- ✓ Define the rights of individual employees in detail. Manage cancellations and credit balances

- ✓ Create points of sale and define which goods can be settled there.

- ✓ Export detailed cash reports as .csv files for further processing in Excel. Various filters are available for this, which you can limit to the exact minute.

Our Software is web-based

MYPOS was developed in cooperation with internationally experienced hotel professionals and is optimized for the processes of hotel and restaurant businesses and their IT infrastructure.

The familiar user interface allows a quick and easy processing of orders, with which your staff can work immediately even without long training.

You do not need a workstation or computer installation, but use the browser of your equipment. The software is installed on a server - where, that's your choice: in our cloud, on a server at your site or privately in the data center. From then on, all authorized employees and, if you wish, also your customers, work in parallel.

For work at service-intensive points of sale, such as a restaurant or your bar, we recommend the use of a touchscreen cash register. Tablets are suitable for the terrace, as long as WLAN coverage with a connection to your installation is guaranteed. Print jobs are sent via the server to network printers, possibly supplemented by fiscalisation authorisations.

Hardware independent

Background Technology

MYPOS is based on mature open source solutions. This achieves a reliability in operation that far surpasses conventional systems and also guarantees maximum compatibility.

Windows, Linux or Macintosh systems? MYPOS integrates into your PMS or enterprise resource planning systems, not vice versa. MYPOS is Internet-enabled by default. You process your data via the Internet via protected connections.

Your staff operates and books, while the head office in the head office analyses the sales figures. Complex interfaces, data transfers or double file input are not necessary.

We are pleased to present MYPOS personally

MY POS comes as a Virtual Maschine

You determine the location of the installation: whether it is for installation on your server on site or in the data center. Or on a server that you only integrate into your network.

On request, we supply you manufacturer-independently according to your requirements.
